

	IC50 _{CMP} - CD45+ cells (μM)	IC50 _{MEP} – CD71+ cells (μM)
Rat	2.83	0.86
Human	4.04	1.56

Table S2 Species-specific drug sensitivity quantified with colony forming unit assays, for both human and rat progenitor cells. Experimental IC50 values (supplementary text S10) showed that human bone marrow cells were more resistant than rat progenitors, with CD71⁺ cells (i.e. MEP) more sensitive for both species.
